

SMART HOME TECH

Simpler than you think

WHAT I'VE HEARD

- Expensive
 - Just another gadget to play with
 - Planned obsolescence
 - Who needs a bluetooth coffee cup?!
- 

BUT MY SYSTEM JUST WORKS

If it's Google Home, Amazon Echo, Apple HomeKit, or a combination of apps that just works - the most important thing is that it works for you.

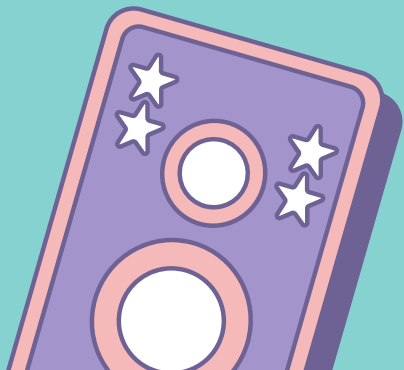

But here's some considerations to consider alternatives

With subscription based models growing, and a cost of living crisis spiralling, every cent counts.

Support can be discontinued - meaning it won't connect with newer or updated devices.

Product could be bricked entirely by the manufacturer, turning it into an expensive paperweight.

Data privacy, censorship, region locking features, paywall locked features

HOME ASSISTANT

The best part is that if you're already using smart home tech with Amazon or Google for example, you can still use most of it with Home Assistant. No need to buy anything new!

Home Assistant is free to download, set-up and use.

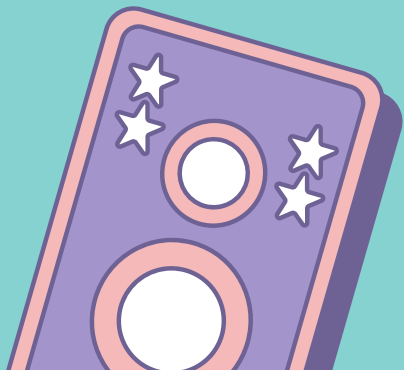

The hardware it needs is cheap, and widely available.

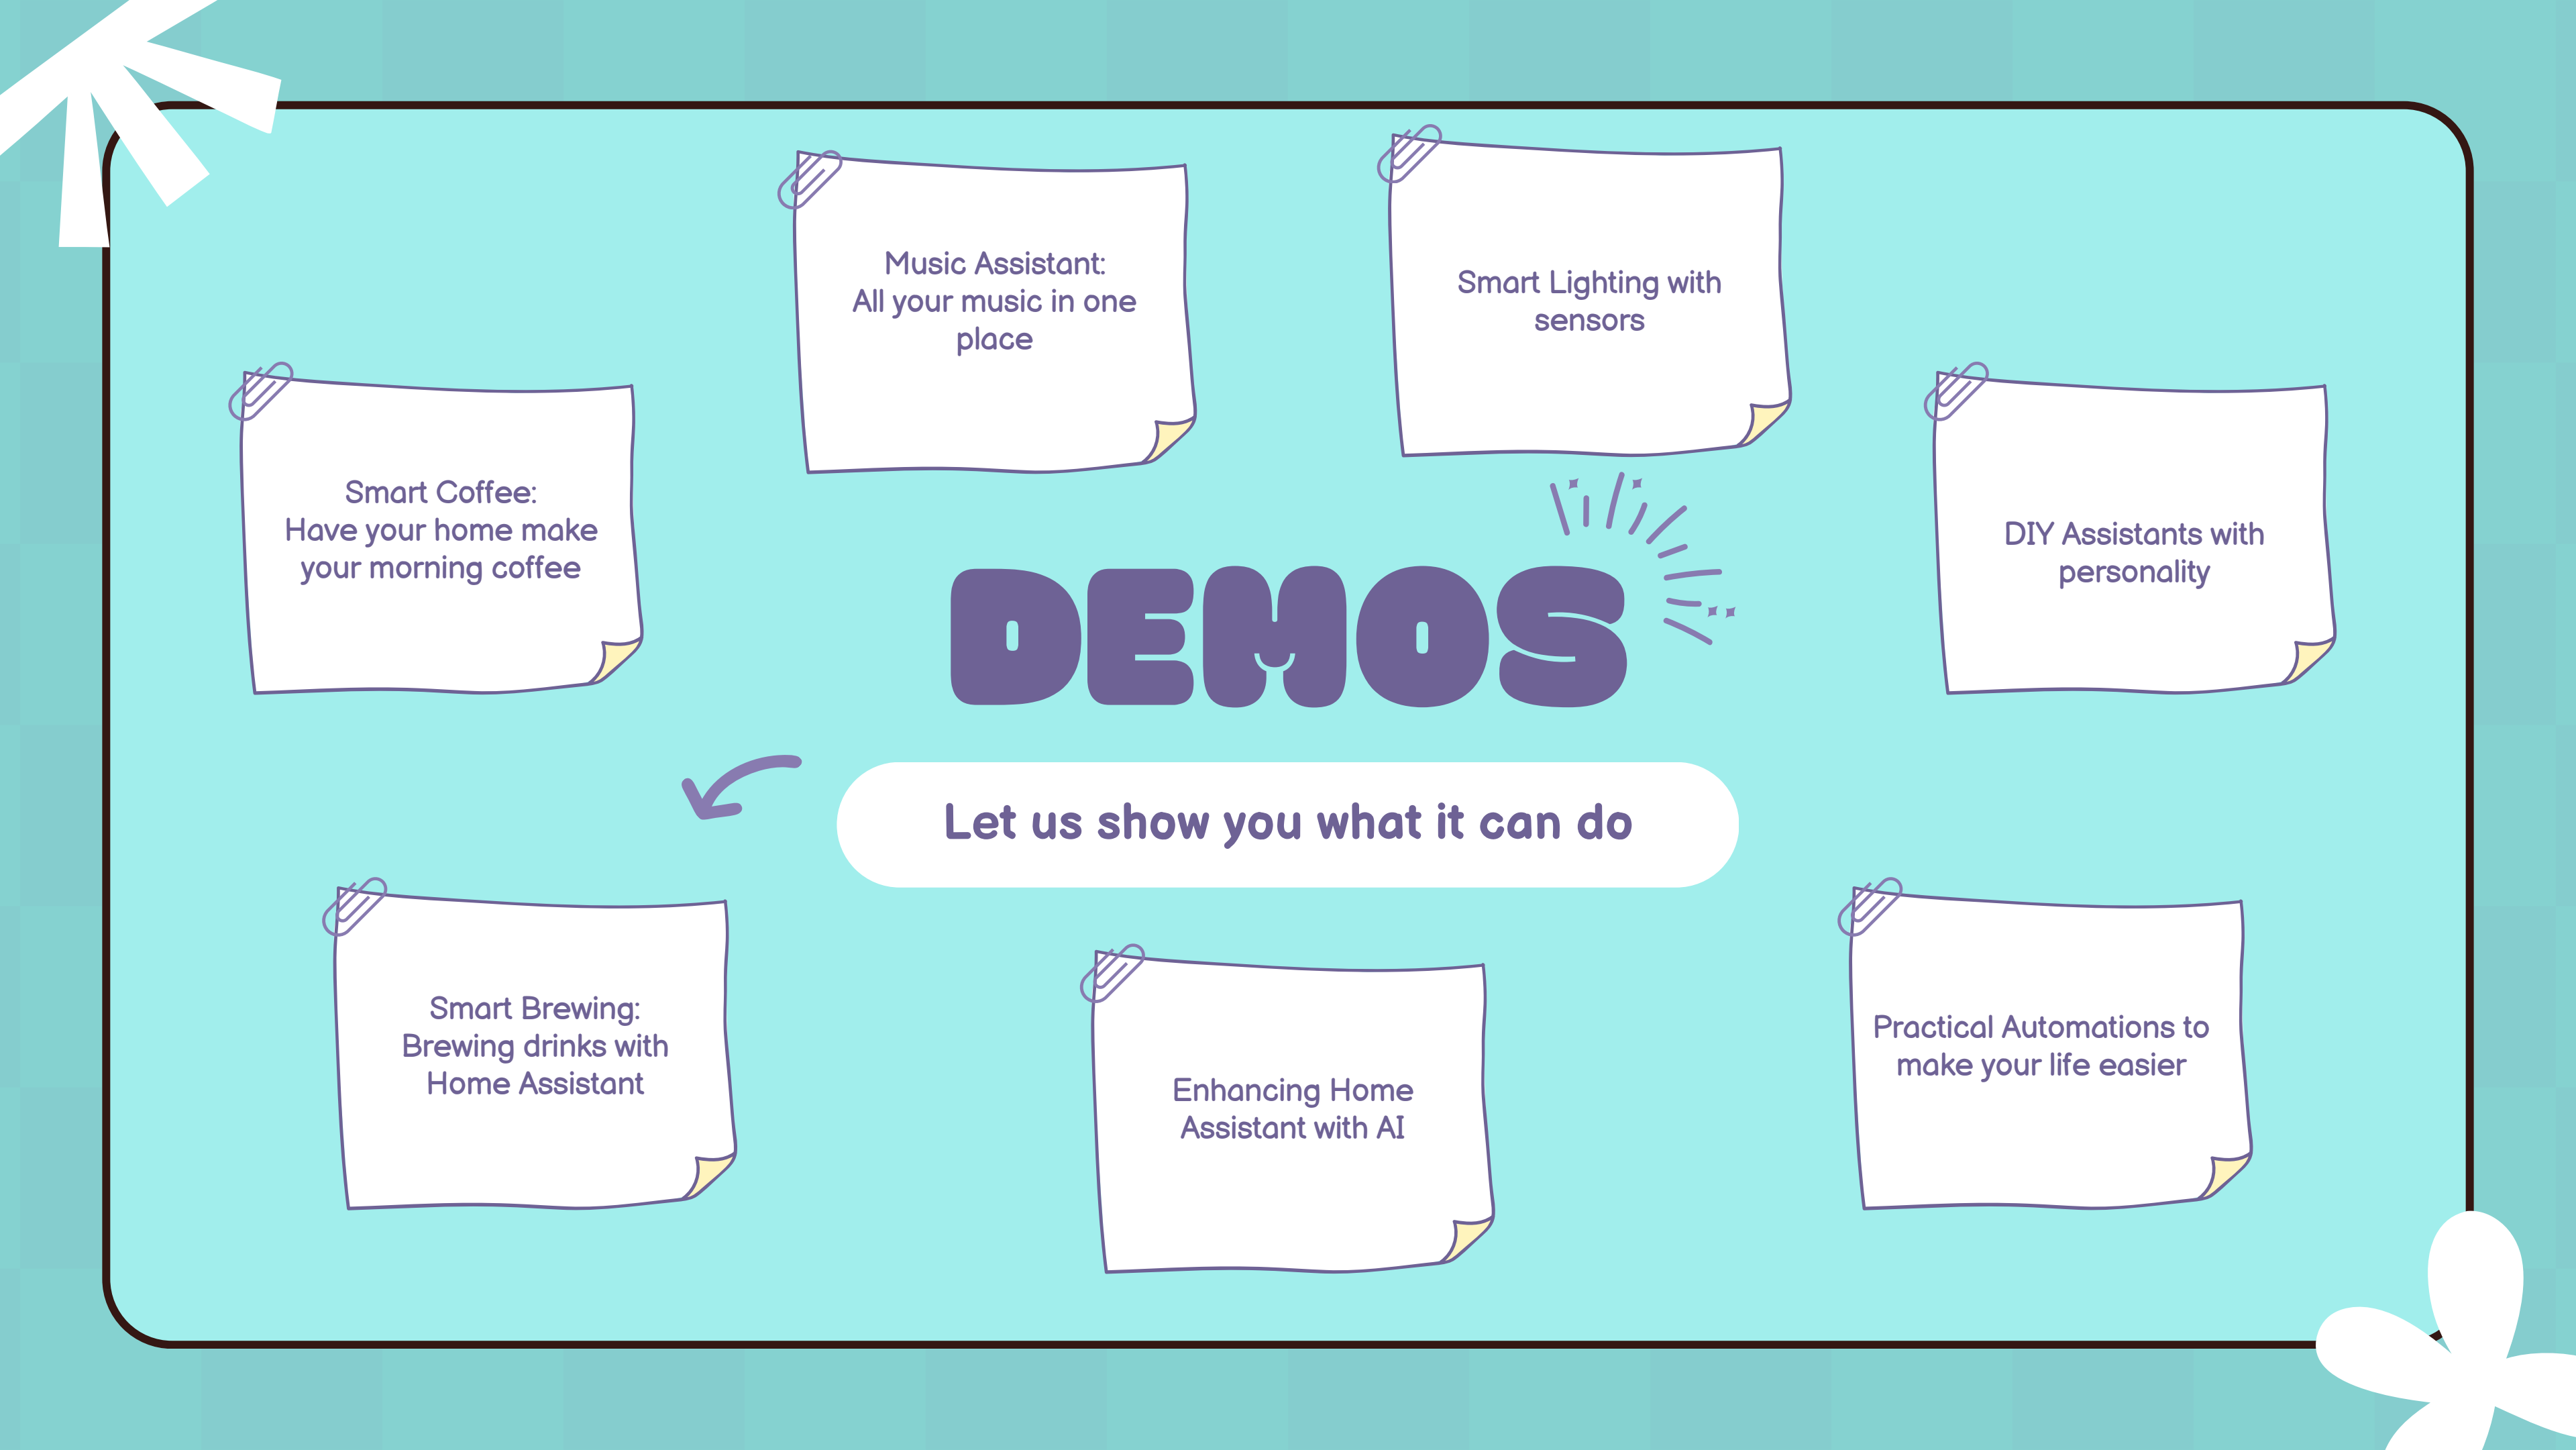

Home Assistant was developed in response to products being dropped from support.

With community help, it can extend the life of devices.

Offers ways to run your smart home entirely locally - including local-only voice assistants.

Regular updates, huge community involvement that helps shape what features are added and improved.

DEMOS

Let us show you what it can do

Music Assistant:
All your music in one
place

Smart Lighting with
sensors

Smart Coffee:
Have your home make
your morning coffee

DIY Assistants with
personality

Smart Brewing:
Brewing drinks with
Home Assistant

Enhancing Home
Assistant with AI

Practical Automations to
make your life easier

THANK YOU SO MUCH!
